

The graph displays the monthly variation of the number of COVID-19 cases in the Republic of Serbia from 2018 to 2023. The x-axis represents the years from 2018 to 2023, and the y-axis represents the number of cases. The data shows a highly volatile trend with significant peaks and troughs, particularly in 2020 and 2022. The highest peak is observed in early 2022, reaching approximately 1,000 cases. The lowest point is observed in late 2022, reaching approximately 100 cases. The overall trend shows a general increase in the number of cases over the period, with a notable decline in 2023.
